

Rockwell Medical Announces Triferic® Presentations at the 2018 International Congress on Peritoneal Dialysis

May 2, 2018

Conference to be held May 5-8, in Vancouver, Canada

WIXOM, Mich., May 02, 2018 (GLOBE NEWSWIRE) -- Rockwell Medical, Inc. (NASDAQ:RMTI), announced today that two Triferic® abstracts have been selected for presentation at the [17th Congress of the International Society for Peritoneal Dialysis \(ISPD\)](#), taking place in Vancouver, Canada, on May 5–8, 2018. Triferic is the Company's novel iron replacement drug for the treatment of iron deficiency in chronic kidney disease patients receiving hemodialysis (HD). Triferic is the only FDA approved therapy indicated to replace iron and maintain hemoglobin in hemodialysis patients.

Presentation schedule Sunday, May 6, 2018 at 1:00PM PDT and Monday, May 7 at 1:10PM PDT:

Single Ascending Dose Study of Intraperitoneal Triferic® (Ferric Pyrophosphate Citrate) in Patients on Chronic Peritoneal Dialysis

Raymond D Pratt, MD, Sarah Grimberg and Ajay Gupta, MD. Rockwell Medical Inc. Wixom MI.

Intraperitoneal (IP) Triferic® (Ferric Pyrophosphate Citrate) in Effects on Cytokines

Raymond D Pratt, MD, Andrzej Breborowicz, MD, PhD, and Ajay Gupta, MD. Rockwell Medical Inc. Wixom MI and Poznan University of Medical Sciences, Poznan, Poland

Raymond D. Pratt, M.D., FACP, Chief Medical Officer of Rockwell Medical commented, "This peritoneal dialysis (PD) study demonstrates that Triferic can deliver iron to PD patients via the dialysis fluid. Based on the iron loss that occurs in PD patients, the ability to administer iron via the PD fluid may be ideal to maintain hemoglobin in these patients. Rockwell plans to continue to investigate Triferic in PD patients."

About Triferic

Triferic is the only FDA approved drug indicated to replace iron and maintain hemoglobin in hemodialysis patients suffering from anemia. Via dialysate during each dialysis treatment, Triferic replaces the 5-7 mg iron loss that occurs in all patients, effectively maintaining their iron balance. Unlike IV iron products, Triferic binds iron immediately and completely to transferrin (carrier of iron in the body) upon entry into the blood and is then transported directly to the bone marrow to be incorporated into hemoglobin, with no increase in ferritin (stored iron and inflammation) and no anaphylaxis, addressing a significant unmet need in overcoming Functional Iron Deficiency (FID) in ESRD patients. Please visit www.triferic.com to view the Triferic mode-of-action (MOA) video and for more information.

About Rockwell Medical

Rockwell Medical is a fully-integrated biopharmaceutical company targeting end-stage renal disease (ESRD) and chronic kidney disease (CKD) with innovative products and services for the treatment of iron replacement, secondary hyperparathyroidism and hemodialysis.

Rockwell's recent FDA approved drug Triferic is indicated for iron replacement and maintenance of hemoglobin in hemodialysis patients. Triferic delivers iron to patients during their regular dialysis treatment, using dialysate as the delivery mechanism. Triferic has demonstrated that it safely and effectively delivers sufficient iron to the bone marrow and maintains hemoglobin, without increasing iron stores (ferritin). Rockwell intends to market Triferic to hemodialysis patients in the U.S. dialysis market and globally.

Rockwell's FDA approved generic drug Calcitriol is for treating secondary hyperparathyroidism in dialysis patients. Calcitriol (active vitamin D) injection is indicated in the management of hypocalcemia in patients undergoing chronic renal dialysis. It has been shown to significantly reduce elevated parathyroid hormone levels. Reduction of PTH has been shown to result in an improvement in renal osteodystrophy. Rockwell intends to market Calcitriol to hemodialysis patients in the U.S. dialysis market.

Rockwell is also an established manufacturer and leader in delivering high-quality hemodialysis concentrates/dialysates to dialysis providers and distributors in the U.S. and abroad. As one of the two major suppliers in the U.S., Rockwell's products are used to maintain human life by removing toxins and replacing critical nutrients in the dialysis patient's bloodstream. Rockwell has three U.S. manufacturing/distribution facilities.

Rockwell's exclusive renal drug therapies support disease management initiatives to improve the quality of life and care of dialysis patients and are intended to deliver safe and effective therapy, while decreasing drug administration costs and improving patient convenience. Rockwell Medical is developing a pipeline of drug therapies, including extensions of Triferic for indications outside of hemodialysis. Please visit www.rockwellmed.com for more information.

Certain statements in this press release constitute "forward-looking statements" within the meaning of the federal securities laws, including, but not limited to, Rockwell's intention to sell and market Calcitriol and Triferic. Words such as "may," "might," "will," "should," "believe," "expect," "anticipate," "estimate," "continue," "predict," "forecast," "project," "plan," "intend" or similar expressions, or statements regarding intent, belief, or current expectations, are forward-looking statements.
